**Activity Organised Academic year 2022-2023**

Students have participated in activities conducted by the Department beyond the topics covered in the syllabus. F.Y.B.Sc Computer science students have developed models and Charts. Students from the second year had developed IoT based projects and designed QR code for different applications. T.Y.B.S.c students had given presentation related to latest technology such as Amazon web service and its related products.

Report on project develop by students beyond curriculum  
Academic year 2022-23

The students of F.Y.Bsc Computer Science enthusiastically developed static models depicting the Microprocessor architecture of 8085. This model was developed using basic craft materials in the most economical way. The model shows the deep understanding of the topic and included intricate details of the Microprocessor. The significant feature of the model is that it had buttons with the real feel.

Interconnection module of memory management was developed by the girl's student from the batch. The model clearly shows the memory mapping in the memory module. The appreciable point in the model is that it shows the exact positioning and particulars as in real structure.

Swimalhi

The above model developed by the first year students explains the three tier architecture of the E-mail server. Model had the look and feel of the real client-server environment. The request- response task was clearly shown.

Sumathi

Students of S.Y.B.Sc Computer science developed certain projects out of sheer curiosity and eagerness to learn and gain hands on experience on certain tools and products beyond the syllabus prescribed by University of Mumbai. An IoT based project that allows only authorized visitor /student entry into the lab .The model can further be extended to allow authorized students to enter college premise.

The above photograph shows the demonstration by S.Y.B.Sc Computer science who had developed an IoT based application to easily handle Projectors and light in the seminar hall. The simulation explains how the light in seminar hall will be automatically turned off when the projector is turned on and vice-versa.

# Flutter Framework Project

Students of S.Y.B.Sc computer science came into a competitive mood to develop small application using Flutter framework. Later their projects were assessed and evaluated by I. T Co-ordinator Prof Sushma Brahmarkar.

## sample QR CODE OF SERVER MACHINE

S.Y.B.Sc Computer science students spent quality time in generating QR code for all the 120 machines available in the computer laboratory, 33 machines in Exam assessment room popularly called as OSM and also for the books available in the department library.

## Sample QR CODE OF BOOK : "Computer based numerical and statistical techniques"

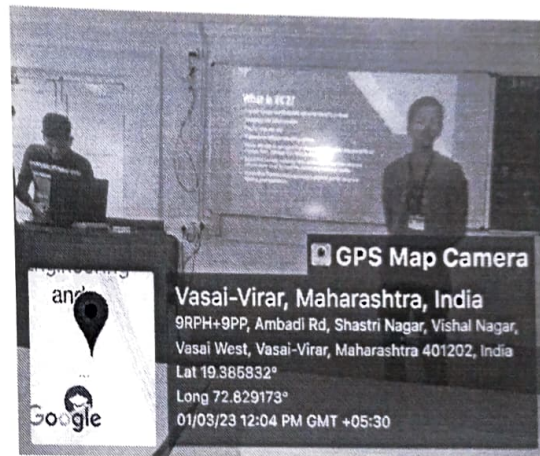

We appreciate the hardwork and patience of the student and their hunger to learn technology and apply them in such small applications. The highlight of these activity is that they do not carry marks nor will it be reflected in their final semester grades.

# Amazon Web Services Presentation

Students of T.Y.B.Sc Computer science showed keen interest to explore their knowledge in Amazon Web Services. The student formed groups and developed a complete technical presentation on one Amazon webservice product. This activity helped student understand the various products, its features and application. It also developed soft skills such as team building, communication and presentation skills.
